STRONGHOLD

New Tenant Onboarding

Agenda

- Support
- Shared Responsibility Model
- Key Security Groups
- Workstation Access - Basics
- Data Transfer - Basics

Support

- CCV.Brown.edu → Documentation → Stronghold
  - https://docs.ccv.brown.edu/stronghold/
- Assistance with issues, software requests, data uploading, data transfers
  - Stronghold-Help@Brown.edu

Shared Responsibility Model

- **High Level PI Responsibilities**
  - Approve access requests and security group(s) membership
  - Review monthly “User Access” and “Last Login” reports
  - Review transfer server alerts to ensure data movement in/out of Stronghold is expected and authorized
  - Ensure compliance with any data use agreements or other agreements governing the use of the data stored on Stronghold

- **High Level CIS Responsibilities**
  - Provide technology and security in accordance with Data Use Agreements
  - Provide technical support, including issue mitigation, assistance with data transfers and software installations

- Memorandum of Understanding

Key Security Groups

- **Admins**
  - Only group which can access the data drive (*reminder*: no data should be written to C); admins group must create subfolders and assign access using below security groups
  - By default, PI only member of this group. Trusted, point person can be added to assist with above tasks & approve group membership
  - This group is member of all other groups
- **Users** - typically used for temp staff
- **Staff** - typically used for permanent staff
- **Import_W** & **Import_R** -
  - controls each step of moving data *into* Stronghold
- **Export_W & Export_R** -
  - controls each step of moving data *out of* Stronghold
- **All** - members who can access Workstation
- **Custom Groups** - can be created upon request

Workstation Access - Basics

- "Tenant" - self contained, highly secure storage and compute env
- Microsoft Remote Desktop Client required
  - For Mac users, client can be downloaded from software.brown.edu
- Accessible from Brown wireless network, Brown wired network (research buildings only) and Brown VPN
- C drive should **not** be used to store data
- Log off workstation, do not click "X"

Data transfer - Basics

- Transfer server utilized for all data movement in and out of Stronghold
- SFTP, FTPS, HTTPS and Integration with Box.com
  - Demo will only include SFTP transfer using Filezilla (available from software.brown.edu → free/open source)
- Real time alert sent to admins group for each executed transfer
- Each step of transfer is controlled by Active Directory security group, so can control who can do what
