STRONGHOLD

New Tenant Onboarding

Agenda

- Overview
- Transfer Server
- Key Security Groups
- Support

Overview

- "Tenant" - self contained, highly secure storage and compute environment
- Accessible from Brown network and VPN
- Shared responsibility model
- Microsoft Remote Desktop Client required
  - For Mac users, download from software.brown.edu
- C drive should **not** be used to store data
- Encrypted or unencrypted storage available
- Log off workstation, do not click "X"

Transfer Server

- Utilized for all data movement in and out of Stronghold
- SFTP, FTPS, HTTPS protocols available for data transfers
- Real time alert sent to admins group for each executed transfer
- Each step of transfer process requires membership in different Active Directory security group, so granular control of who can execute which step

Key Security Groups

- **Admins**
  - Only member is PI (or approved delegate)
  - By default, member of all other other groups
  - Responsible for creating all folders on data drive and assigning appropriate security groups for access

Security groups for folder/data access

- **Users** - typically used for temp staff
- **Staff** - typically used for permanent staff
- **Custom Groups** - can be created upon request

"**All**" **Group** - by default all members of above groups are members, allows for workstation access

Security groups for data transfers - "keys to the kingdom"

- **Import_W & Import_R** - data *into* Stronghold
- **Export_W & Export_R** - data *out of* Stronghold

Support

- CCV.Brown.edu → Documentation → Stronghold
